Applicant(s)

MOLNAR, INGO

Examiner

AZIZUL CHOUDHURY

Art Unit

2445

Period for Reply -- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 13 February 2009.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-14 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-14 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
- Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
- Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
 - ☐ Certified copies of the priority documents have been received in Application No. _____.
 - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO/SB/08)
- 4) ☐ Interview Summary (PTO-413)
- 5) ☐ Notice of Informal Patent Application
- 6) ☐ Other: _____

Detailed Action

Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on February 13, 2009 has been entered.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Challenger et al (US Pat No: 6,256,712) in view of Curtis (US Patent No: 6,934,761), hereafter referred to as Challenger and Curtis, respectively.

1. With regards to claims 1, 5, 9 and 11, Challenger teaches through Curtis, in a communication server, a method of responding to a client application, the method comprising the steps of: a cache disposed in an operating system kernel

(Challenger's design uses computer and all current computers/servers inherently require an operating system and all current operating systems inherently require a kernel; see column 5, lines 41-67, Challenger); receiving from the client application an application protocol request (A webpage is a response to a request because a webpage must be requested by a client) corresponding to a response that can be displayed as a combination of a portion of the response that changes and a part of the response that is static (Challenger's design allows the webpage (equivalent to the claimed response to request) to contain cached (equivalent to the claimed static) information; see column 2, line 56 – column 3, line 5 and column 13, lines 57-62, Challenger); creating at the server the portion of the response that changes (Challenger's design allows the webpage (equivalent to the claimed response to request) to contain newly refreshed content (equivalent to the claimed dynamic portions/portion of the response that changes to the application); see column 2, lines 55-66 and column 13, line 65 – column 14, line 8, Challenger); sending the portion of the response that changes to the client application (column 28, lines 46-58, Challenger) and then retrieving the part of the response that is static from a cache disposed in an operating system kernel (a kernel is an inherent part of an operating system and a server inherently has an operating system; see column 13, line 57 – column 14, line 22, Challenger. Also see Curtis below); and sending the part of the response that is static to the client application (column 28, lines 46-58, Challenger. Challenger discloses a design enabling the updating content within a server so that updated

content is submitted to the client. The design allows for current copies of both dynamic (portion that changes to the application) and static data (objects) to be cached within the server (column 2, lines 5-8, Challenger). The cached data (objects) is consistently updated (column 2, lines 54-55, Challenger). When required, the data (objects) (both static and dynamic) are dynamically rebuilt as needed and provided to the client (column 2, line 53 – column 3, line 34, Challenger). Finally, the use of a cache/buffer/registry within an operating system of a computer is inherent).

While Challenger teaches a system for a dynamic (portion that changes to the application) and static webpage, Challenger does not explicitly recite a "request" and a "response to a request." In the same field of endeavor, Curtis also teaches a web server design. Within Curtis' disclosure it is taught how a client makes a HTTP request (webpage request) and the server responds to request; see column 2, lines 48-51, Curtis. In particular, the request and response is handled by the cache within the kernel of the server; see column 2, lines 46-51, Curtis. Handling the server requests and responses at the kernel cache level allows for minimum processing resources to be required. Therefore it would have been obvious to one skilled in the art, during the time of the invention, to have combined the teachings of Challenger with those of Curtis to handle web server requests and responses at the kernel cache level with minimum processing resources; see column 2, lines 35-36, Curtis.

2. With regards to claims 2, 6, 10, 13 and 14, Challenger teaches through Curtis the method wherein the cache disposed within the operating system kernel is a protocol object cache (Challenger's design allows for caches (*column 2, lines 5-8, Challenger*) (*column 5, lines 51-52, Challenger*)).
3. With regards to claims 3, 4, 7, 8 and 12, Challenger teaches through Curtis the method wherein the application protocol request and the reply are formatted according to a hypertext transmission protocol (HTTP) (*Challenger's design allows for HTTPD (Figure 30A, Challenger). Hence, HTTP is supported*).
4. The obviousness statement applied to claims 1, 5, 9 and 11 are applicable to their respective dependent claims.

Response to Arguments

Applicant's arguments with respect to claims 1-14 have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to AZIZUL CHOUDHURY whose telephone number is (571)272-3909. The examiner can normally be reached on M-F.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Glenton B. Burgess can be reached on (571) 272-3949. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
